UIL COMPUTER SCIENCE WRITTEN TEST

2021 INVITATIONAL A

JANUARY/FEBRUARY 2021

General Directions (Please read carefully!)

- 1. DO NOT OPEN THE EXAM UNTIL TOLD TO DO SO.
- 2. There are 40 questions on this contest exam. You will have 45 minutes to complete this contest.
- 3. All answers must be legibly written on the answer sheet provided. Indicate your answers in the appropriate blanks provided on the answer sheet. Clean erasures are necessary for accurate grading.
- 4. You may write on the test packet or any additional scratch paper provided by the contest director, but NOT on the answer sheet, which is reserved for answers only.
- 5. All questions have ONE and only ONE correct answer. There is a 2-point penalty for all incorrect answers.
- 6. Tests may not be turned in until 45 minutes have elapsed. If you finish the test before the end of the allotted time, remain at your seat and retain your test until told to do otherwise. You may use this time to check your answers.
- 7. If you are in the process of actually writing an answer when the signal to stop is given, you may finish writing that answer.
- 8. All provided code segments are intended to be syntactically correct, unless otherwise stated. You may also assume that any undefined variables are defined as used.
- 9. A reference to many commonly used Java classes is provided with the test, and you may use this reference sheet during the contest. AFTER THE CONTEST BEGINS, you may detach the reference sheet from the test booklet if you wish.
- 10. Assume that any necessary import statements for standard Java SE packages and classes (e.g., java.util, System, etc.) are included in any programs or code segments that refer to methods from these classes and packages.
- 11. NO CALCULATORS of any kind may be used during this contest.

Scoring

- 1. Correct answers will receive 6 points.
- 2. Incorrect answers will lose 2 points.
- 3. Unanswered questions will neither receive nor lose any points.
- 4. In the event of a tie, the student with the highest percentage of attempted questions correct shall win the tie.

STANDARD CLASSES AND INTERFACES — SUPPLEMENTAL REFERENCE

```
package java.lang
                                                             package java.util
class Object
                                                              interface List<E>
  boolean equals (Object anotherObject)
                                                              class ArrayList<E> implements List<E>
  String toString()
                                                               boolean add (E item)
  int hashCode()
                                                                int size()
                                                                Iterator<E> iterator()
interface Comparable<T>
                                                               ListIterator<E> listIterator()
  int compareTo (T anotherObject)
                                                               E get(int index)
    Returns a value < 0 if this is less than anotherObject.
                                                               E set(int index, E item)
    Returns a value = 0 if this is equal to anotherObject.
                                                               void add(int index, E item)
    Returns a value > 0 if this is greater than anotherObject.
                                                               E remove (int index)
class Integer implements Comparable<Integer>
                                                             class LinkedList<E> implements List<E>, Queue<E>
  Integer (int value)
                                                               void addFirst(E item)
  int intValue()
                                                               void addLast(E item)
  boolean equals(Object anotherObject)
                                                               E getFirst()
  String toString()
                                                               E getLast()
  String toString(int i, int radix)
                                                               E removeFirst()
  int compareTo (Integer anotherInteger)
                                                               E removeLast()
  static int parseInt(String s)
                                                             class Stack<E>
class Double implements Comparable<Double>
                                                               boolean isEmpty()
  Double (double value)
                                                               E peek()
  double doubleValue()
                                                               E pop()
                                                               E push (E item)
  boolean equals (Object anotherObject)
  String toString()
                                                             interface Queue<E>
  int compareTo (Double anotherDouble)
                                                             class PriorityQueue<E>
  static double parseDouble(String s)
                                                               boolean add (E item)
class String implements Comparable<String>
                                                               boolean isEmpty()
  int compareTo(String anotherString)
                                                               E peek()
  boolean equals (Object anotherObject)
                                                               E remove()
  int length()
                                                             interface Set<E>
  String substring(int begin)
                                                             class HashSet<E> implements Set<E>
    Returns substring(begin, length()).
                                                             class TreeSet<E> implements Set<E>
  String substring(int begin, int end)
                                                               boolean add (E item)
    Returns the substring from index begin through index (end - 1).
                                                               boolean contains (Object item)
  int indexOf(String str)
                                                               boolean remove (Object item)
    Returns the index within this string of the first occurrence of str.
                                                                int size()
    Returns -1 if str is not found.
                                                               Iterator<E> iterator()
  int indexOf(String str, int fromIndex)
                                                               boolean addAll(Collection<? extends E> c)
    Returns the index within this string of the first occurrence of str,
                                                               boolean removeAll(Collection<?> c)
    starting the search at fromIndex. Returns -1 if str is not found.
                                                               boolean retainAll(Collection<?> c)
  int indexOf(int ch)
                                                              interface Map<K,V>
  int indexOf(int ch, int fromIndex)

  static char toLowerCase (char ch)
                                                                void add (E item)
                                                                void set (E item)
class Math
  static int abs(int a)
                                                             class Scanner
  static double abs (double a)
                                                               Scanner (InputStream source)
  static double pow(double base, double exponent)
                                                                Scanner (String str)
  static double sqrt(double a)
                                                               boolean hasNext()
  static double ceil (double a)
                                                               boolean hasNextInt()
  static double floor (double a)
                                                               boolean hasNextDouble()
  static double min(double a, double b)
                                                               String next()
  static double max(double a, double b)
                                                               int nextInt()
  static int min(int a, int b)
                                                               double nextDouble()
  static int max(int a, int b)
                                                               String nextLine()
  static long round (double a)
                                                               Scanner useDelimiter (String regex)
  static double random()
```

Returns a double greater than or equal to 0.0 and less than 1.0.

UIL COMPUTER SCIENCE WRITTEN TEST — 2021 INVITATIONAL A

Note: Correct responses are based on Java SE Development Kit 14 (JDK 14) from Oracle, Inc. All provided code segments are intended to be syntactically correct, unless otherwise stated (e.g., "error" is an answer choice) and any necessary Java SE 14 Standard Packages have been imported. Ignore any typographical errors and assume any undefined variables are defined as used. For all output statements, assume that the System class has been statically imported using: import static java.lang.System.*;

```
Question 1.
Which of the following decimal numbers is equivalent to the binary number 11100111<sub>2</sub>?
A) 247
                     B) 239
                                         C) 115
                                                            D) 231
                                                                                  E) 103
Question 2.
What is the output of the code segment to the right?
                                                    out.print(9 / 4 * 3 + 7 - 2);
A) 16
           B) 18.0
                     C) 11
                               D) 11.0
                                         E) 11.75
Question 3.
What is the output of the code segment to the right?
A) Earth
   Mars
   Venus
                                                    out.print("Earth");
B) Earth Mars Venus
                                                    out.print("Mars");
C) EarthMarsVenus
                                                    out.print("Venus");
D) "Earth" "Mars" "Venus"
E) "Earth"
   "Mars"
   "Venus"
Question 4.
What is the output of the line of code shown on the right?
                                                    String str = "java.lang.System.out";
A) 3
                  B) 2
                                    C) 5
                                                    out.print(str.indexOf('a'));
D) 6
                  E) 1
Question 5.
What is the output of the line of code shown on the right?
                                                    out.print(true ^ true ^ true);
A) true
B) false
Question 6.
                                                    out.print(Math.ceil(1.01) +
What is the output of the code segment to the right?
                                                                  Math.floor(-1.01);
A) -1.01 B) 0.0
                     C) 0.01
                                         E) - 0.01
                               D) 2.02
Question 7.
                                                    int x = 8, y = 9;
What is the output of the code segment to the right?
                                                    double a = 1.5, b = 1.25;
          B) 12.67 C) 19.2
                                                    out.print(x * b + y / a);
A) 16.0
                               D) 17.2
                                         E) 18.0
Question 8.
                                                    final int M = 13;
What is the output of the code segment to the right?
                                                    int x = 5, y = 6, z = 14;
   A) 13 5614
                                                    if(x * y >= M)
   B) 13 25
                                                           if(z - 1 == M)
                                                                  if(x + y - M > z)
   C) 25
                                                                         out.print(M + " ");
   D) There is no output.
                                                                         out.print(x + y + z);
   E) There is no output due to an error.
```

```
Question 9.
What is the output of the code segment to the right?
                                                   lint x = 0;
   A) ******
                                                   ldo {
                                                          x++;
   B) *****
                                                          out.print("*");
   C) ****
                                                   |} while (x < 7);
   D) ******
   E) *
Question 10.
What is the output or the error of the code segment to the right?
   A) [0, 5, 2, 6, 3, 5, 6]
                                                   lint[] list = {0,4,2,6,3,5,1};
                                                   list[1] = list[list.length - 2];
   B) [0, 5, 2, 6, 3, 5, 7]
                                                   list[list[3]] = list.length;
   C) [0, 1, 2, 6, 3, 5, 7]
                                                   out.print(Arrays.toString(list));
   D) [5, 4, 2, 6, 3, 5, 7]
   E) There is no output due to an error.
Question 11.
import static java.lang.System.out;
import java.util.Scanner;
import java.io.File; //LINE #1
import java.io.IOException;
public class Q11 {
      public static void main(String[] args) throws IOException{ //LINE #2
             File file = new File("values.dat");
             Scanner scanner = new Scanner(file); //LINE #3
             while(scanner.hasNext()) //LINE #4
                    out.println(scanner.next());
             file.close(); //LINE #5
One of the lines in the class shown above contains an error. Which line is it?
   A) LINE #1
                B) LINE #2
                              C) LINE #3
                                            D) LINE #4
                                                         E) LINE #5
Question 12.
What is the output of the code segment to the right?
                                                   int h = 1;
   A) 36
                                                   for(int g = 2; g < 10; g++) {
   B) 55
                                                          h += q;
   C) 44
                                                   out.print(h);
   D) 45
   E) 46
Question 13.
What is the output of the code segment shown on the right?
   A) 14
                                                    int w = 5, x = 6, y = 4, z = 1;
   B) 22
                                                    out.print(++w + x * y >> z);
   C) 17
   D) 15
   E) 24
```

Question 14.

Which of the following data types may be used to store 32768 and requires the smallest amount of memory to do so?

- A) byte
- B) short
- C) double
- D) long
- E) int

Question 15.

What is the output of the code segment to the right?

- **A)** 524
- **B)** 634
- **C)** 534
- **D)** 625
- **E)** 521

Question 16.

How many constructors are present in the class Class shown on the right?

- A) None
- **B)** 1
- **C)** 2
- **D)** 3
- **E)** 4

Question 17.

What is the output of **LINE #1** in the client code shown here?

```
Class obj1 = new Class();
Class obj2 = new
  Class(obj1.d().length(),0.75,"computer");
out.println(obj2.d()); //LINE #1
```

- A) scmputer
- B) mputer
- C) puter
- D) coience
- E) com

Question 18.

What is the output of LINE #1 in the client code shown here?

```
Class obj1 = new Class();
Class obj2 = new
   Class(obj1.d().length(),0.75,"computer");
out.println(obj2.d());
Class obj3 = new
   Class(obj1.a(),obj2.c(),"competition");
out.println(obj3.d); //LINE #1
```

- A) petition
- B) mpetition
- C) etition
- D) scipetition
- E) There is no output due to an error.

```
ArrayList<Integer> list = new
ArrayList<Integer>();
list.add(6);list.add(5);
list.add(4);list.add(3);
list.add(2);list.add(1);
out.print(list.get(1));
out.print(list.remove(4));
out.print(list.indexOf(1));
```

//Use the class shown below to answer
//questions 16, 17 and 18.

```
public class Class {
private int i;
private double d;
private String s;
public Class(int m, double n, String o) {
    i = m;
    d = n;
    s = o;
public Class() {
    i = 8;
    d = 0.5;
    s = "science";
}
public int a() {
    return (int) (d * b());
public int b() {
    return i;
public double c() {
    return d;
public String d() {
    return s.substring(a());
}
}
```

Question 19. ArrayList < Integer > x = newWhat is the output of the code segment shown on the right? ArrayList<Integer>(); A) true true ArrayList<Integer> y = new ArrayList<Integer>(); B) true false Integer[] $i = \{5, 6, 4, 3, 7, 1, 8, 9, 2\};$ C) false true for(int m:i) { D) false false x.add(m);y.add(m); **E)** Will not compile. Type mismatch error. System.out.print((x == y) + " "); System.out.print(x.equals(y)); Question 20. What is the output of code segment shown on the right? **A)** 8.5 double a = 4.99, b = 3.5; **B)** 8 double c = (int)a + b;**C)** 7.0 out.print(c); **D)** 7.5 **E)** 7 Question 21. public class PetsTest { enum Pets { What is the output of the class PetsTest? DOG, CAT, LIZARD, RABBIT, HAMSTER, PIG A) LIZARD1 B) RABBITCAT public static void main(String[] args) { C) RABBIT1 Pets[] myPets = Pets.values(); System.out.print(myPets[3].name()); D) RABBIT2 System.out.print(Pets.CAT); E) 1CAT } Question 22. Which of the following represents the output of the code segment shown here? char[][] letters = new char[5][5]; char letter = 'A'; for(int i = 0; i < letters.length; i++)</pre> for(int j = 0; j < letters[i].length; j++)</pre> letters[i][j] = letter++; for(char[] arr:letters) System.out.println(Arrays.toString(arr)); **A** [A, B, C, D, E] **B** [A, B, C, D, E] **C** [A, F, K, P, U] [F, G, H, I, J] [F, G, H, I, J] [B, G, L, Q, V] [K, L, M, N, O] [K, L, M, N, O] [C, H, M, R, W] [D, I, N, S, X] [P, Q, R, S, T] [P, Q, R, S, T] [E, J, O, T, Y] [U, V, W, X, Y] [U, V, W, X, Y, **D** [B, C, D, E, F] **E** [B, G, L, Q, V] [G, H, I, J, K] [C, H, M, R, W] [L, M, N, O, P] [D, I, N, S, X] [Q, R, S, T, U] [E, J, O, T, Y] [V, W, X, Y, Z][F, K, P, U, Z]

Question 23. What is the output of the code segment shown on the right? **A)** 77 int x = -3; **B)** 77.25 out.print(5 + x + 'A' + 4.25); C) 5-3A4.25**D)** 2A4.25 **E)** 71.25 Question 24. What is printed by the code segment shown on the right? double j = 12.85;**A)** 0.84 double k = 6.3;**B)** 7.15 double p = k += j %= 3;**C)** 7 out.print(((int)(p * 100)) / 100.0); **D)** 0.0 E) There is no output due to an error. Question 25. What is printed by the line of code shown on the right? **B)** 00101100 out.print(0b10110001 >> 0b00000010); **C)** 0 E) There is no output due to an error. Question 26. int y = 5; for (int x = 0; x < 10; x++) Which of the following represents the output of the code switch(x) { segment shown on the right? case 0: **A)** 3528 case 1: case 3: y += x; break; **B)** 4536 case 4: **C)** 2016 case 5:break; case 6: y -= 2; break; **D)** 504 case 7: **E)** 1527 case 8: case 9: y *= x; break; default: y /= x; out.print(y);

Question 27.

Which of the following statements about functional interfaces is false?

- A) A functional interface may contain numerous default methods.
- B) A functional interface may not contain any fields.
- C) A functional interface may contain exactly one abstract method.
- **D)** A functional interface may override the public boolean equals (Object obj) method from the Object class.
- E) Every method within a functional interface must be abstract.

Question 28.

Consider the code segment shown here. Which of the following can replace the missing code to ensure that all the elements in list are placed into the same row and column of table as they are in list?

```
A) for (int i = 0; i < list.length; i++)
    for (String[] letters : list)
      table.add(i,letters);</pre>
```

B) for(int i = 0; i < list.length; i++)
 for(String[] letters : list)
 table.get(i).add(letters[i]);</pre>

C) for(String[] letters : list)
 table.add(letters);

D) for (int i = 0; i < list.length; i++)
 table.get(i).add(list[i][i]);</pre>

E) More than one of the above.

Question 29.

Consider the code segment shown on the right. What is the output of that code segment?

- **A)** 121
- **B)** 110
- **C)** 512
- **D)** 1048576
- **E)** 262144

Question 30.

What is the output of the code segment shown on the right?

- **A)** M
- B) ssissippi
- C) ss
- D) pp
- E) There is no output due to an error.

String[] s = "Mississippi".split("i", 2);
out.print(s[2]);

Question 31.

Which of the following is the output of the main method shown here?

```
public static void main(String[] args) {
    method("abcde");
    method("abcdef");
}

public static void method(String s) {
    if(s.length() % 2 == 0) {
        method(s.substring(s.length() / 2));
        method(s.substring(0, s.length() / 2));
    }
    else if(s.length() > 1) {
        out.print(s.substring(s.length() / 2, s.length() / 2 + 1));
        method(s.substring(0, s.length() / 2));
        method(s.substring(s.length() / 2 + 1));
    }
    else
        out.print(s);
}
```

A) abcdeabcdef $\,\,$ B) fedcbaedcba $\,$ C) cabdebacedf $\,\,$ D) cedbaefdbca $\,$ E) cbaededfbac

Question 32.

Which of the following code segments must be added to this sort method to complete the implementation of an ascending insertion sort?

```
public static void sort(int[] list)
{
//missing implementation
}
```

```
A) for(int i = 0; i < list.length - 1; i++)
{
  int k = i;
  for(int j = i + 1; j < list.length; j++)
    if(list[j] < list[k])
        k = j;
  int t = list[i];
  list[i] = list[k];
  list[k] = t;
}</pre>
```

```
C) for (int m = 0; m < list.length - 1; m++)
    for (int n = m + 1; n < list.length; n++)
    if (list[n] < list[m])
    {
       int t = list[n];
       list[n] = list[m];
       list[m] = t;
    }</pre>
```

```
E) More than one of the above.
```

```
B) for (int x = 1; x < list.length; x++)
{
    int y = list[x];
    int z = x;
    while(z > 0 && y < list[z - 1] )
    {
        list[z] = list[z - 1];
        z--;
    }
    list[z] = y;
}</pre>
```

```
D) if (i == list.length) return;
  int k = i;
  for (int j = i + 1; j < list.length; j++)
    if (list[j] < list[k])
        k = j;
  int t = list[i];
  list[i] = list[k];
  list[k] = t;
  sort(list, i + 1);</pre>
```

Question 33. What is the output of the code segment shown on the right? Stack<String> s = new Stack<String>(); A) A D B C E s.push("A");s.push("B");s.add("C"); s.add(1, "D");s.push("E"); B) E C B D A s.add(0, s.pop()); C) C B D A E while(!s.empty()) out.print(s.pop() + " "); D) E A D B C E) A B C D E Question 34. What is the value of the expression shown in the diagram on the right if C is false? A) true B) false C) Cannot be determined. Question 35. Which of the following shows the output of the code segment shown on the right? **A)** [7, 1, 4, 6, 8, 9, 2, 5] int[] a = {3,7,1,9,8,6,4,2,5,0}; Arrays.sort(a, 3, 7); **B)** [7, 1, 2, 4, 6] int[] b = Arrays.copyOfRange(a, a[2], a[5]); **C)** [7, 1, 2, 4, 6, 8] out.print(Arrays.toString(b)); **D)** [7, 1, 4, 6, 8, 9, 2] **E)** [2, 3, 4] Question 36. What is the output of the code segment shown on the right? String str = "UIL Comp^Sci-2021"; lint r = 0;for(int i = 0; i < str.length(); i++)**B)** 5 if(str.substring(i, i + 1).matches("[^a-z]")) **C)** 6 r = r + 1;out.print(r); **D)** 10 **E)** 7 Question 37. Which of the following is the output of the line of code shown on the right? **A)** 26 out.print(18 | 3 & 5); **B)** 10 **C)** 7 **D)** 30

E) 19

Question 38.

Which of the following statements is false?

- A) An interface may not have any constructors.
- **B)** An abstract class may not have any constructors.
- **C)** All variables within an interface must be declared as public static final.
- **D)** All methods within an interface must be public abstract instance methods.
- E) In a nonabstract subclass extended from an abstract class, all the abstract methods must be implemented.

Question 39.

What is the most restrictive run time efficiency for the code segment shown on the right for exceptionally large values of n. Express your answer <u>using Big O notation</u> and write it in the blank provided on the answer document.

```
for(int m = 1; m <= n; m++)
  for(int o = n; o > 1; o/=2)
    x++;
out.println(x);
```

Question 40.

Write the signed 8-bit binary two's complement representation of -104 in the blank provided on the answer document.
