UIL COMPUTER SCIENCE WRITTEN TEST 3A-47

2022 REGION

APRIL 2022

General Directions (Please read carefully!)

- 1. DO NOT OPEN THE EXAM UNTIL TOLD TO DO SO.
- 2. There are 40 questions on this contest exam. You will have 45 minutes to complete this contest.
- 3. All answers must be legibly written on the answer sheet provided. Indicate your answers in the appropriate blanks provided on the answer sheet. Clean erasures are necessary for accurate grading.
- 4. You may write on the test packet or any additional scratch paper provided by the contest director, but NOT on the answer sheet, which is reserved for answers only.
- 5. All questions have ONE and only ONE correct answer. There is a 2-point penalty for all incorrect answers.
- 6. Tests may not be turned in until 45 minutes have elapsed. If you finish the test before the end of the allotted time, remain at your seat and retain your test until told to do otherwise. You may use this time to check your answers.
- 7. If you are in the process of actually writing an answer when the signal to stop is given, you may finish writing that answer.
- 8. All provided code segments are intended to be syntactically correct, unless otherwise stated. You may also assume that any undefined variables are defined as used.
- 9. A reference to many commonly used Java classes is provided with the test, and you may use this reference sheet during the contest. AFTER THE CONTEST BEGINS, you may detach the reference sheet from the test booklet if you wish.
- 10. Assume that any necessary import statements for standard Java SE packages and classes (e.g., java.util, System, etc.) are included in any programs or code segments that refer to methods from these classes and packages.
- 11. NO CALCULATORS of any kind may be used during this contest.

Scoring

- 1. Correct answers will receive 6 points.
- 2. Incorrect answers will lose **2 points**.
- 3. Unanswered questions will neither receive nor lose any points.
- 4. In the event of a tie, the student with the highest percentage of attempted questions correct shall win the tie.

STANDARD CLASSES AND INTERFACES - SUPPLEMENTAL REFERENCE

```
package java.lang
                                                              package java.util
class Object
                                                              interface List<E>
                                                              class ArrayList<E> implements List<E>
 boolean equals (Object anotherObject)
                                                                boolean add (E item)
  String toString()
                                                                int size()
  int hashCode()
                                                                Iterator<E> iterator()
interface Comparable<T>
                                                                ListIterator<E> listIterator()
  int compareTo (T anotherObject)
                                                                E get(int index)
    Returns a value < 0 if this is less than anotherObject.
                                                               E set(int index, E item)
    Returns a value = 0 if this is equal to anotherObject.
                                                               void add(int index, E item)
    Returns a value > 0 if this is greater than anotherObject.
                                                               E remove (int index)

 Double (double value)
                                                                E peek()
  double doubleValue()
                                                                E pop()
  boolean equals (Object anotherObject)
                                                                E push (E item)
  String toString()
                                                              interface Oueue<E>
  int compareTo (Double anotherDouble)
                                                              class PriorityQueue<E>
  static double parseDouble(String s)
                                                                boolean add(E item)
class String implements Comparable<String>
                                                                boolean isEmpty()
  int compareTo(String anotherString)
                                                                E peak()
  boolean equals (Object anotherObject)
                                                                E remove()
  int length()
                                                              interface Set<E>
  String substring(int begin)
                                                              class HashSet<E> implements Set<E>
    Returns substring (begin, length()).
                                                              class TreeSet<E> implements Set<E>
  String substring(int begin, int end)
                                                                boolean add(E item)
    Returns the substring from index begin through index (end - 1).
                                                                boolean contains (Object item)
  int indexOf (String str)
                                                                boolean remove (Object item)
    Returns the index within this string of the first occurrence of str.
                                                                int size()
    Returns -1 if str is not found.
                                                                Iterator<E> iterator()
  int indexOf(String str, int fromIndex)
                                                                boolean addAll(Collection<? extends E> c)
    Returns the index within this string of the first occurrence of str,
                                                                boolean removeAll(Collection<?> c)
    starting the search at fromIndex. Returns -1 if str is not found.
                                                                boolean retainAll(Collection<?> c)

UIL COMPUTER SCIENCE WRITTEN TEST – 2022 REGION

Note: Correct responses are based on Java SE Development Kit 17 (JDK 17) from Oracle, Inc. All provided code segments are intended to be syntactically correct, unless otherwise stated (e.g., "error" is an answer choice) and any necessary Java SE 17 Standard Packages have been imported. Ignore any typographical errors and assume any undefined variables are defined as used For all output statements, assume that the System class has been statically imported using: import static java.lang. System.*;

1248 629 13121256 1728 64346 1817	1' \		
Question 1.	/ O		
Which of the following is equal to 1011012 * 100102?	767-		
A) 110100010102 B) 11001010102 C) 110101010	010 ₂ 0) 10010001010 ₂ (E) None of these.		
Question 2.	\08		
What is the output of the code segment to the right?			
A) 50 B) 50.5 C) 10 D 108	out.println(17 % 12 * 23 - 14 / 2);		
E) There is no output due to a syntax error	D 105		
Question 3.			
What is the output of the code segment to the right?			
(a) 8 8 8 2 . 72			
8) 8 2 . 72-	out.printf("%%%%%.2f", 2.718);		
C) 2.72 D) %%%%2.7			
E) There is no output due to a compile error			
Question 4.			
What is the output of the code segment to the right?			
A) true B) false C) 5	<pre>out.print("grapple".endsWith("apple", 5));</pre>		
D) There is no output due to a compile error	out.print(grappie .endswith(appie , 3//,		
E) There is no output due to a runtime error			
Question 5.	F		
What is the output of the code segment to the right?			
A) true	<pre>boolean a = true; boolean b = false; out.print(!(a b) ^ (!a && !b));</pre>		
false			
	TTTTTT		
Question 6.			
What is the output of the code segment to the right?			
A) 7.0 B) 8.0 (9.0 D) 27.0	out.print(Math.cbrt(27*27));		
E) There is no output due to a compile error			
Question 7.	int x = 5;		
What is the output of the code segment to the right?			
1 0 1.0 0 1.5 b) 2	y += 2.5;		
E) There is no output due to a compile error	out.print(s, - 4);		

```
Question 8.
                                                        int r = 1;
                                                        switch("case")
What is the output of the code segment to the right?
   A) 1
                                                          case "c": r++;
                                                          case "ca": r++;
  (B) 2
                                                          case "cas": r++;
   C) 3
                                                          case "case": r++;
   D) 6
                                                          default: r++;
   E) There is no output due to a compile error
                                                        out.print(r);
                                                        for (int x = 7; x \le 89; x += 4)
How many asterisks are printed by the code shown to the right?
                                                          out.print("**");
A) 20
                                           E) 166
                                D) 42
                                                        1
Question 10.
What is the output of the code segment to the right?
                                                        char[] chars = "UILCS".toCharArray();
  (S, I, L, C, L)

   B)[C, I, S, U, U]
                                                       chars[4] = chars[2];
                                                       Arrays.sort(chars);
   () [C, I, L, L, U]
                                                       out.print(Arrays.toString(chars));
   D) [C, I, L, L, S]
   E) None of the above
       public static void main(String[] args) <CODE>
             Scanner f = new Scanner(new File("data.dat"));
Question 11.
Consider the main method shown above. Which of the following could replace the section marked <CODE> to compile without
error?
I)
       catch FileNotFoundException
II)
       throws FileNotFoundException
III) throws IOException
IV)
       throws Exception
       No additional code is needed
V)
  A) I
  B) II
  C) V
   D) II and IV
   E) II, III, and IV
Question 12.
                                                        int p = 1;
What is the output of the code segment to the right?
                                                        int s = 0;
   A) 127
   B) 128
  (C))511
   b) 512
                                                       out.print(s);
```

(i) None of the above

Question 13. What is the correct order of operations for the operators listed I. ~ unary complement on the right? A) I II III II. << left shift B) II III I C) III II I III. + addition D) I III II E) III I II Question 14. What is the output of the code segment to the right? A) -128 B) -127out.print(~Byte.MAX VALUE); **c**) 0 **þ**) 1 **(E)**) 127 Question 15. ArrayList<Integer> list; list = new ArrayList<>(); What is the output of the code segment to the right? for(int i = 0;i<6;i++) { list.add(10*i + 1); 12 31 A) 12 list.add(10*i + 4); 47 **(8)** 16 31-15 list.add(10*i + 5);1525 **C)** 17 list.add(10*i + 6); 1620 list.add(10*i + 19); 1929 **D)** 21 E) None of the above out.println(list.get(15) - list.get(7)); Question 16. Random r = new Random();double ct = 0;Which of the following is the best estimate for the output of the double it = 10000; code to the right? for(int i=1; \(\frac{1}{2} <= it; i++\) A) 0.125 double x = r.nextDouble(); B)0.25double y = r.nextDouble(); (0.5)if(y < .5 & x < y)ct++; D)0.75E) 1.0 out.print(ct / it); Question 17. Which of the following is the best estimate of the output of the code segment shown on the right? A) true out.print(5 instanceof Integer); B) false **C)** 5 D) There is no output due to a compile error

E) There is no output due to a runtime error

Question 18.

What is the output of the code segment to the right?

- A) -1
- **B)** 4
- **C)** 5
- **D)** 6
- **E)** 7

Question 19.

How many times does the line labeled /*LINE:*/ execute before terminating in the code to the right?

- A) 0
- B) 1
- **C)** 2
- D) 3
- E) 4

```
int[] ints = new int[] {1,4,6,8,9,11,15};
int s = 10;
int L = -1;
int R = ints.length;
int M = (L (R) / 2;
while (R (L > 1))
{
    /*LINE:*//
    M = (L (R) / 2;
    int c = ints[M];
    if (c <= s)
        L = M;
    else
        R = M;
}
out.print(L);</pre>
```

Question 20.

What is the output of the code segment to the right?

- A) true 3
- B) false 3
- C) true 5
- D) false 5
- E) There is no output due to a compile error

```
TreeSet<Integer> set1;
set1 = new TreeSet<Integer>();
HashSet<Integer> set2;
set2 = new HashSet<Integer>();
for(int i = 0;i<5;i++)
{
   set1.add(i * 3);
   set2.add((i + 2) * 3);
}
boolean eq = set1.equals(set2);
out.print(eq+" "+set2.size());</pre>
```

Question 21.

What is the output of the client code below?

int[] ints = new int[]{1,4,1,5,1,1,7};
out.print(dp(ints));

- A) 1
- **B)** 3
- **C)** 4
- **D)** 5
- **E)** 7

Question 22.

What is the output of the client code below?

int[] ints = new int[]{3,1,4,1,5,9};
out.print(rec(ints, 0));

- A) 1
- **B)** 3
- **C)** 4
- **D)** 5
- **E)** 6

Question 23.

Which of the following is the most restrictive Big O upper bound of method call dp (ints)? Assume ints is of length N

- A) O(N)
- B) O(NlogN)
- () $0 (N^2)$
- \mathbf{D}) $O(N^3)$
- E) O (2N)

Question 24.

Which of the following is the most restrictive Big O upper bound of method call rec(ints)? Assume ints is of length N

- A) O(N)
- B) O(NlogN)
- C) $O(N^2)$
- \mathbf{D}) O (N³)
- E) None of the above

```
public static int dp(int[] ints)
  int[] dp = new int[ints.length];
  Arrays.fill(dp, 1);
  int ret = 0;
  for(int i = 1;i<dp.length;i++)</pre>
    for (int j = i-1; j>=0; j--)
      if(ints[j] <= ints[i])</pre>
        dp[i] = Math.max(dp[i],dp[j] + 1);
    ret = Math.max(ret, dp[i]);
  return ret;
public static int rec(int[] ints, int ind)
  int r = 1;
  for(int i = ind+1;i<ints.length;i++)</pre>
    if(ints[i] >= ints[ind])
    r = Math.max(r, 1 + rec(ints, i));
  return r;
}
```

Question 25.

How many instance variables does a member of the fish class have?

- A) 0
- **B)** 1
- **C)** 2
- **(6)**, 3
- **E)** 4

Question 26.

What is the output of the client code shown below?

```
pet a = new pet(5, "jeff");
pet b = new fish(5, "jeff");
out.println(a.equals(b));
```

- A) true
- B) false
- C) jeff
- D) There is no output due to a compile error
- E) There is no output due to a runtime error

Question 27.

What is the output of the client code shown below?

```
pet a = new pet(5, "jeff");
pet b = new fish(5, "jeff");
out.println(b.equals(a));
```

- A) true
- B) false
- C) jeff
- D) There is no output due to a compile error
- E) There is no output due to a runtime error

Question 28.

What is the output of the client code shown below?

```
pet a = new fish(5, "jeff");
pet b = new fish(5, "jeff");
out.println(a.equals(b));
```

- A) true
- 8) false
- C) jeff
- D) There is no output due to a compile error
- E) There is no output due to a runtime error

```
public class pet{
  private int weight;
 private String name;
 public pet(int w, String n)
   this.weight = w;
   this.name = n;
 public boolean equals(pet p)
    if (weight == p.weight) {
     return name.equals(p.name);
    return false;
  }
 public String toString()
   return name+" "+weight;
  }
}
private class fish extends pet{
 public fish(int w, String n)
    super(w, n);
  }
 public boolean equals (pet p)
   if (p instanceof fish)
     return p.equals(this);
   return false;
  }
```

What is the worst case time complexity of add () for Java's PriorityQueue? Assume comparison is an O(1) operation.

- A) 0(1)
- B) O (log(N))
- C) O (N)
- D) O(NlogN)
- E) O (N2)

Question 30.

What is the output of the code segment to the right?

- **B)** 6
- **C)** 108
- D) There is no output due to a compile error
- E) There is no output due to a runtime error

2777

int num = 27;
num >>= 34;
out.print(num);

Question 31.

What is the best case time complexity of bubble sort?

- A) O(1)
- **B)** O(N)
- C) O(NlogN)
- **D)** O(N^2)
- E) None of the above

Question 32.

The method run () takes 2 seconds to complete on an array of 100 elements. Which of the following is the best estimate of how long it would take to complete on an array of 300 elements?

- A) 2 seconds
- B) 6 seconds
- C) 18 seconds
- D) 36 seconds
- E) 54 seconds

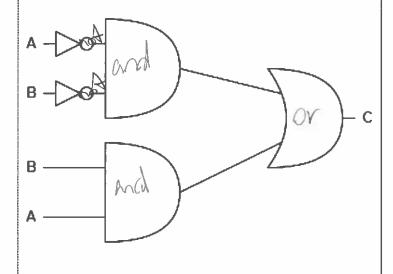

```
static int run(int[] ints){
   int ret = 0;
   for(int i: ints)
       for(int j: ints)
       for(int k: ints)
       ret += i+j+k;
   return ret;
}
```

Question 33.

Which of the following is logically equivalent to the digital electronics diagram to the right?

- **A**) A ⊕ B
- (B)(A * B) + (!A * !B)
- C) (A * B)
- D) (A + B)
- E) None of the above

Question 34.

What is the output of the client code below?

```
Inline obj = new Inline() {
    public int go(int x) {return ~x;}
};
out.print(obj.go(27));

A) -26
B) -27
C) 27
D) -28
E) There is no output due to a compile error
```

```
public interface Inline
{
   public int go(int i);
}
```

Question 35.

The letters "DBFCAGE" are inserted into a binary search tree in order. Which of the following traversals will result in a visitation order of DBFACEG?

- A) Pre-order traversal
- B) Post-order traversal
- C) In-order traversal
- D) Level-order traversal
- E) None of the above

```
For questions 36 - 38, use the structure code to the right and
client code below:
   Structure s = new Structure(10);
   int[] a = new int[] {1,4,6,9,3,4,3};
   int[] b = new int[] {5,8,7,2,7,6,8};
   int y = 0;
   int n = 0;
   for(int i = 0; i < a.length; i++)
      boolean result = s.union(a[i], b[i]);
                                                     public class Structure{
      if (result)
                                                       int[] p;
          y++;
      }else {
                                                       public Structure(int sz)
         n++;
                                                          p = new int[sz];
                                                          Arrays.fill(p, -1);
   /*LINE 1:*/
   out.println(y+" "+n);
   /*LINE 2:*/
                                                       public int find(int x)
   out.println(s.find(3));
   int mx = 0;
                                                           if(p[x] < 0)
   for (int i = 0; i < 10; i++) {
                                                             return x;
      mx = Math.max(mx, s.sz(i));
                                                          int ret = find(p[x]);
                                                          p[x] = ret;
   /*LINE 3:*/
                                                           return ret;
   out.println(mx);
Question 36.
What is the output of the client code marked as Line 1?
                                                       public int sz(int x)
   A) 4 3
                                                          return -p[find(x)];
   B) 5 2
   C) 6 1
                                                       public boolean union(int a, int b)
   D) 7 0
   E) None of the above
                                                           int pa = find(a);
                                                           int pb = find(b);
Question 37.
                                                          if(pa == pb) {
                                                              return false;
What is the output of the client code marked as Line 2?
   A) 1
                                                          p[pa] += p[pb];
                                                          p[pb] = pa;
   B) 3
                                                          return true;
   C) 4
   D) 7
                                                     }
   E) 2
Question 38.
What is the output of the client code marked as Line 3?
   A) 1
   B) 2
   C) 3
   D) 5
   E) 9
```

Question 39.

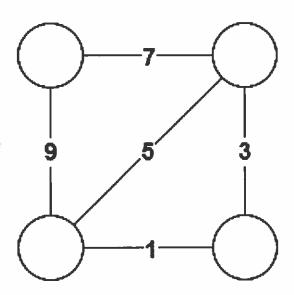

How many unique strings could replace *CODE*\ for the code below to output true? Write your answer in the blank provided on the answer document.

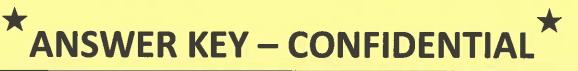

```
String A = "[ABC]{1,2}";
String B = "[BCD]{2,3}";
String C = \*CODE*\;
out.print(C.matches(A) && C.matches(B));
```

Question 40.

A minimum spanning tree is a subset of edges of minimum total weight that connect a graph. In other words, any two vertices in the graph can reach each other by traversing only edges selected to be part of the minimum spanning tree.

Below is a weighted, undirected graph. What is the total edge weight sum of a minimum spanning tree of the graph below? Write your answer in the blank provided on the answer document.

Questions (+6 points for each correct answer, -2 points for each incorrect answer)

1)	<u>B</u>

Note: Correct responses are based on Java SE Development Kit 17 (JDK 17) from Oracle, Inc. All provided code segments are intended to be syntactically correct, unless otherwise stated (e.g., "error" is an answer choice) and any necessary Java SE 17 Standard Packages have been imported. Ignore any typographical errors and assume any undefined variables are defined as used.

^{*} See "Explanation" section below for alternate, acceptable answers.

Explanations:

	T 8	404404 45 40040 40 45 40 040 44004040	
1.	В	101101 = 45, 10010 = 18, 45 * 18 = 810 = 1100101010	
2.	D	(17 % 12 * 23) – (14 / 2) = (115) – (7) = 108	
3.	В	"%%" formats to "%", and "%.2f" formats a floating point to two places after the decimal	
4.	D	endsWith takes only one argument. The overload in the question does not exist.	
5.	В	!(a b) and (!a && !b) are logically equivalent by De Morgan's law, and two like values will always xor to false	
6.	С	$(27 * 27) = (3 * 3 * 3) (3 * 3 * 3) = (3 * 3) (3 * 3) (3 * 3) = 9^3$	
7.	Α	The += shortcut operator truncates 4.5 to 4, and then 5 – 4 = 1	
8.	С	Variable r starts as 1 and is then incremented by the "case" case and the default because no break is included above	
9.	D	The arithmetic series 7, 11, 15,, 83, 87 consists of (87 - 7)/4 + 1 = 21 terms. 2 asterisks are added per term, totaling to 42.	
10.	D	The array resulting from these operations should be sorted and have a duplicate L and missing U	
11.	E	FileNotFoundException, IOException, and Exception are all acceptable as each are more specific than the next.	
12.	С	The sum of all powers of 2 from 1n will be 2 ⁿ – 1.	
13.	D	Unary complement has the highest precedence, followed by addition and then left shift	
14.	A	The complement of Byte.MAX VALUE is Byte.MIN VALUE	
15.	В	The 16'th element in the sequence will be 31, and the 8 th element will be 15. 31-15 = 16	
16.	A	A geometric intuition: x and y are selected uniformly from the square. The probability of	
		y > .5 x < y y < .5 x < y y < .5 x > y	
17.	D	Primitives cannot be used in instanceof, compilation error	
18.	В	The binary search code in this question will find the index of the weak floor (the largest value less than or equal to s). In this case that index is 4	
19.	D	L = -1, R = 7, M = 3 L = 3, R = 7, M = 5 L = 3, R = 5, M = 4	
20.	А	Both sets contain the same values, so equals() will evaluate to true. Because sets cannot contain duplicates, only 3 unique values will be present.	
21.	D	Dp and rec both find the length of the longest weakly increasing subsequence. For #21, this is 1,1,1,1,7 -> 5	
22.	С	3,4,5,9 or 1,1,5,9 -> 4	
23.	C	There are O(n) elements to fill in the dp table, and each one takes O(n) time to fill, resulting in O(n^2) complexity	
24.	E	The complexity of brute force recursive LIS is exponential, greater than all of the given	
27.		answer choices	
	С	answer choices Fish inherits 2 instance variables from pet	
25. 26.	C A	answer choices Fish inherits 2 instance variables from pet Because a is a pet, the pet equals() method is called and returns true	

28.	E	Because both a and b are fish, they will call each others equals() method in an infinite loop, causing a runtime error	
29.	В	PQ add is a log(n) operation	
30.	В	X >> Y is actually evaluated as X >> ((Y % 32) + 32) % 32	
31.	В	Bubble sort best case complexity occurs when a sorted array is given. In this case, bubble sort must look at each element once to verify that the array is sorted.	
32.	E	Run() is an O(n^3) method. Hence, a 3x increase in array size will result in a 3^3 increase in runtime. 2*27 = 54	
33.	В	this is a straightforward translation from digital electronics to logic	
34.	D	go(x) returns the unary complement of x. Unary complement of 27 is -28	
35.	D	D F	
		DBFACEG is the level order traversal of the tree produced.	
36.	С	The structure in 36-38 is a Union-Find (also known as Disjoint Set) Union Find are used to maintain and join a collection of sets. Find(x) finds the leader of x's set Union(x,y) combines the sets x and y belong to, or returns false if they are already in the same set. This knowledge is not necessary to solve the problem though, it can be easily traced as well. For question 36, the only union operation to fail will be the last, as 3 and 8 already belong to the same set due to (4,8) (4,6) (6,7) (7,3). Hence y = 6 and n = 1	
37.	С	The parent array of s before question 37 is [-1, -2, 9, 4, -5, 1, 3, 6, 4, -2]. Find(3) on this array will result in 4	
38.	D	The maximum set size after all operations is 5	
39.	4	C must be a string of length 2, consisting of only characters B and C. Valid strings are	
J y .	4	"BB","CC","BC","CB".	
		The MST of the graph uses edge weights 1,3,7 (5 creates a cycle and would be useless,
